

# The `catchfile` package

Heiko Oberdiek\*  
<heiko.oberdiek at googlemail.com>

2016/05/16 v1.7

## Abstract

This package catches the contents of a file and puts it in a macro. It requires  $\varepsilon$ - $\text{\TeX}$ . Both  $\text{\LaTeX}$  and plain  $\text{\TeX}$  are supported.

## Contents

<b>1 Documentation</b>	<b>2</b>
<b>2 Implementation</b>	<b>2</b>
2.1 Reload check and package identification . . . . .	2
2.2 Catcodes . . . . .	3
2.3 Preparations . . . . .	4
2.4 Looking for primitive \input . . . . .	4
2.5 Input file check . . . . .	5

---

\*Please report any issues at <https://github.com/ho-tex/oberdiek/issues>

# 1 Documentation

The package relies on  $\varepsilon$ -TeX's `\everyeof`. Otherwise it aborts with an error message.

```
\CatchFileDef {\langle cmd \rangle} {\langle file name \rangle} {\langle setup \rangle}
\CatchFileEdef {\langle cmd \rangle} {\langle file name \rangle} {\langle setup \rangle}
```

Macro `\langle cmd \rangle` is defined with the contents of file `\langle file name \rangle`. `\CatchFileDef` uses `\def`, `\CatchFileEdef` `\edef` for the definition. Additional setup code for setting catcodes or treatment of line ends can be given in code `\langle setup \rangle`. See the test files for an example.

# 2 Implementation

```
1 (*package)
```

## 2.1 Reload check and package identification

Reload check, especially if the package is not used with L<sup>A</sup>T<sub>E</sub>X.

127     }\@ehd
128   \endgroup
129   \expandafter\CatchFile@AtEnd
130 \fi%
131 \endgroup

```

## 2.4 Looking for primitive \input

\CatchFile@Input The package needs the expandable primitive `\input`. However there are formats that redefine it. For example, L<sup>A</sup>T<sub>E</sub>X's `\input` is not expandable, but it stores the primitive in `\@@input`. The third possibility is `\pdfprimitive`, introduced in pdfL<sup>A</sup>T<sub>E</sub>X 1.40.0.

Thus we try to find the primitive and store it in `\CatchFile@Input`. If it is used, it must be expanded twice (because of the solution with `\pdfprimitive`).

247              \endgroup
248              \etex@unexpanded{%
249                  \edef#1{\etex@unexpanded{##1}}%
250              }%
251          }%
252      }%
253  }%
254  }%
255  #3\relax
256  \expandafter\expandafter\expandafter\CatchFile@Do
257  \CatchFile@Input\CatchFile@File\relax
258 \fi
259 }

\relax after #3 was added to make it more robust in case the user uses something
like

```

\CatchFileDef{\content}{\jobname.tt}{\endlinechar=-1}

that expands the following \expandafter after #3 prematurely (contribution of Martin Scharrer).

**\CatchFile@EOF** If the file is read the catcode mappings are fixed. This means that the same character cannot occur inside the file with different catcodes. Thus we use as end of file marker the at sign twice with different catcodes.

```

260 \begingroup
261 \lccode65=64 % lowercase('A') = '@,
262 \lccode66=64 % lowercase('B') = '@,
263 \catcode65=8 % catcode('A') = subscript
264 \catcode66=3 % catcode('B') = math shift
265 \lowercase{\endgroup
266 \def\CatchFile@EOF{AB}%
267 }

268 \CatchFile@AtEnd%
269 
```

## 4 Installation

### 4.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

[CTAN:macros/latex/contrib/oberdiek/catchfile.dtx](http://ctan.org/pkg/catchfile) The source file.

[CTAN:macros/latex/contrib/oberdiek/catchfile.pdf](http://ctan.org/pkg/catchfile) Documentation.

**Bundle.** All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](http://ctan.org/install/macros/latex/contrib/oberdiek.tds.zip)

---

<sup>1</sup><http://ctan.org/pkg/catchfile>

*TDS* refers to the standard “A Directory Structure for T<sub>E</sub>X Files” ([CTAN:tds/tds.pdf](#)). Directories with `texmf` in their name are usually organized this way.

## 4.2 Bundle installation

**Unpacking.** Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

**Script installation.** Check the directory `TDSScripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl  
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

## 4.3 Package installation

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain T<sub>E</sub>X:

```
tex catchfile.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>catchfile.sty</code>	→ <code>tex/generic/oberdiek/catchfile.sty</code>
<code>catchfile.pdf</code>	→ <code>doc/latex/oberdiek/catchfile.pdf</code>
<code>test/catchfile-test1.tex</code>	→ <code>doc/latex/oberdiek/test/catchfile-test1.tex</code>
<code>test/catchfile-test2.tex</code>	→ <code>doc/latex/oberdiek/test/catchfile-test2.tex</code>
<code>test/catchfile-test3.tex</code>	→ <code>doc/latex/oberdiek/test/catchfile-test3.tex</code>
<code>catchfile.dtx</code>	→ <code>source/latex/oberdiek/catchfile.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`’s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

## 4.4 Refresh file name databases

If your T<sub>E</sub>X distribution (teT<sub>E</sub>X, mikT<sub>E</sub>X, ...) relies on file name databases, you must refresh these. For example, teT<sub>E</sub>X users run `texhash` or `mktexlsr`.

## 4.5 Some details for the interested

**Attached source.** The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk catchfile.pdf unpack_files output .
```

**Unpacking with L<sup>A</sup>T<sub>E</sub>X.** The .dtx chooses its action depending on the format:

**plain T<sub>E</sub>X:** Run docstrip and extract the files.

**L<sup>A</sup>T<sub>E</sub>X:** Generate the documentation.

If you insist on using L<sup>A</sup>T<sub>E</sub>X for docstrip (really, docstrip does not need L<sup>A</sup>T<sub>E</sub>X), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{catchfile.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL<sup>A</sup>T<sub>E</sub>X:

```
pdflatex catchfile.dtx
makeindex -s gind.ist catchfile.idx
pdflatex catchfile.dtx
makeindex -s gind.ist catchfile.idx
pdflatex catchfile.dtx
```

## 5 Catalogue

The following XML file can be used as source for the **TEX Catalogue**. The elements **caption** and **description** are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is **catchfile.xml**.

```
547 <catalogue>
548 <?xml version='1.0' encoding='us-ascii'?>
549 <!DOCTYPE entry SYSTEM 'catalogue.dtd'>

573 </catalogue>
```

## 6 History

[2007/05/30 v1.0]

- First version.

[2007/09/09 v1.1]

- Catcode section rewritten.

[2007/11/11 v1.2]

- Use of package `pdtexcmds` for LuaTeX support.

[2010/03/01 v1.3]

- Fix for unknown `\@PackageErrorNoLine`.

[2010/04/08 v1.4]

- `\closein` also added if `\ifeof` is true.

[2010/04/28 v1.5]

- `\CatchFileDef`: Getting rid of warning ‘end of semi simple group entered at line ... of a different file’ (Florent Chervet).
- `\CatchFileDef`: Fix for error ‘Illegal parameter number in definition of ...’ (HO) including improvement that uses `\unexpanded` if available (Florent Chervet).

[2011/03/01 v1.6]

- `\relax` added after the setup argument of `\CatchFileDef` to prevent premature file reading (Martin Scharrer).

[2016/05/16 v1.7]

- Documentation updates.

## 7 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
