

L^AT_EX Style For Technical Information Reports of the Engineer Research and Development Center *

Boris Veytsman[†]

2009/07/22, v1.1

Abstract

This package provides class for typesetting Technical Information Reports of the Engineer Research and Development Center, US Army Corps of Engineers.

1 Introduction

Technical publications for Engineer Research and Development Center, US Army Corps of Engineers follow an elaborate style [1]. This style is accompanied by templates for a popular word processor software. In this class, commissioned by US Army Corps of Engineers, we try to recreate this style for L^AT_EX.

There are several kinds of documents described by [1]: Technical Report, Technical Note, Miscellaneous Paper, Contract Report, Letter Report, Monograph, Special Report, Brochure. In this class we follow the guidelines for Technical Reports (TR). However, it can be used for other kinds of documents as long as they do not differ much from Technical Reports.

2 User Guide

2.1 Installation

The class uses a number of L^AT_EX packages. Normally they should be present in any up-to-date distribution. If you do not have them, you can download them using the links below prior to using the class.

You will need `mathgifg` [2]: the L^AT_EX package providing the access to Microsoft Georgia and ITC Franklin Gothic. Of course you will need the fonts themselves. You will also need `graphics` bundle [3], packages `geometry` [4], `caption` [5], `ragged2e` [6], `longtable` [7], `dcolumn` [8], `fancyhdr` [9], `natbib` [10] and `amsmath` [11].

The installation of the class follows the usual practice [12] for L^AT_EX packages:

1. Run `latex` on `erdc.ins`. This will produce the L^AT_EX class `erdc.cls`.
2. Put the files `erdc.cls`, `red_corps_castle2.eps` and `red_corps_castle2.pdf` to the place where L^AT_EX can find it (see [12] or the documentation for your T_EX system).
3. Update the database of file names. Again, see [12] or the documentation for your T_EX system for the system-specific details.
4. The file `erdc.pdf` provides the documentation for the package (this is the file you are probably reading now).

As an alternative to items 2 and 3 you can just put the file `erdc.cls` in the working directory where your `.tex` file is.

2.2 Invocation

To use the class, put in the preamble of your document

```
\documentclass[<options>]{erdc}
```

The class should work both with `latex` and `pdflatex` work flows. Accordingly it is supplied with US Army Corps of Engineers in both EPS and PDF formats.

- options*
- 8pt
 - 9pt
 - 10pt
 - 11pt
 - 12pt
- \frontmatter
- \laboratory
- The class recognizes the standard L^AT_EX options, shared by the most document classes [13]. The default font size changing options (8pt, 9pt, ..., 12pt) have no effect other than producing a warning in the log since the font sizes of the class are fixed by the guidelines [1].
- ## 2.3 Front Matter
- . The command \frontmatter starts the *Front Matter* of the document. This part includes title page, table of contents, list of figures, list of tables.
- The cover page of the Technical Report should have the center name for Center-level reports or laboratory name for laboratory level reports. By default a technical report is assumed to be a Center-level one, and the center name (Engineering Research and Development Center) is printed in the cover page. The macro \laboratory{\textit{Laboratory Name}} overrides this default, for example:
- ```
\laboratory{Cold Regions Research and Engineering Laboratory}
```
- A line break command \\ can be used inside this command to achieve a desirable line break in the laboratory name if the automatic one is not right.
- \reportnum
- The command \reportnum{\textit{Report Number}} is used to store the project number. For example,
- ```
\reportnum{ERDC/CRREL SR-05-78}
```
- The report number should include the laboratory abbreviation as its prefix.
- \program
- The command \program{\textit{Program Title}} is used to store the title of the program. For example,
- ```
\program{Military Engineering Technology}
```
- \title
- The command \title is used to store project name: \title{\textit{Title}}. For example:
- ```
\title{A New Project}
```
- \subtitle
- The command \subtitle{\textit{Sub Title}} us used to store the project subtitle. For example,
- ```
\subtitle{Model Investigation}
```
- \date
- The macro \date stores the date of the document, for example
- ```
\date{March 2009}
```

```
\author{A. U. Thor \and C. O. R. Respondent \and C. O. Author}
\affiliation{Construction Engineering Research Laboratory\\
U.S. Army Engineer Research and Development Center\\
2902 Newmark Drive\\
Champaign, IL 61826-9005}
\author{John M. Smith}
\affiliation{Coastal and Hydraulics Laboratory\\
U.S. Army Engineer Research and Development Center\\
3909 Halls Ferry Road\\
Vicksburg, MS 39180-6199}
```

The macro `\author{\langle Authors\rangle}` stores the names of authors that share the same affiliation. The authors with the same affiliation should be listed in the same `\author` macro, separated by the keyword `\and`. Do not put commas and the word “and” between the authors’ names: L^AT_EX will take care of the proper punctuation. The macro `\affiliation{\langle Affiliation\rangle}` stores the affiliation of the authors immediately preceding this command. If a report is prepared by several laboratories, or a laboratory and an outside contractor, then you should list the authors with the same affiliation, then show the affiliation, then repeat for the next affiliation. For example:

Note that the guidelines [1] do not say how to typeset the authors that have several affiliations. Accordingly we do not deal with this case here.

`\coverart` It is recommended to put some artwork on the cover of the title page. It is set up by the command `\coverart[\langle options\rangle]{\langle file\rangle}`. The syntax of the command is the same as the syntax of the command `\includegraphics` of the `graphicx` package [3]. The obligatory argument `\langle file\rangle` is the name of the graphics file with the logo, and `[\langle options\rangle]`, if present, may, for example, set the dimensions of the graphics. By default the graphics is scaled to cover the full width of the page. Note that our class uses the “extended” version `graphicx` of the package with its “key-value” syntax. For example,

```
\coverart[width=2in]{red_corps_castle2.eps}
```

The format of the graphics file depends on the T_EX engine used. If you use `latex→dvips→pstoppdf` route, then you need PostScript files (PS or EPS). If you use `pdflatex` engine, then you need graphics files in JPEG, PNG or PDF formats (see [12] for more information).

`\reporttype` The type of the report is stored in the macro `\reporttype{\langle type\rangle}`, for example:

```
\reporttype{Final Report}
```

`\distribution` All reports should have a distribution statement. There are several standard distribution statements, approved by Department of Defense Directive 5230.24 [14]. By default the reports have Statement A: *Approved for public release; distribution*

is unlimited. To change the default, use the macro \distribution{\langle Distribution Statement\rangle}, for example

```
\distribution{Distribution authorized to U.S. Government Agencies  
only; Test and Evaluation; November 2005. Other requests should be  
referred to U.S. Army Engineer Research and Development Center}
```

\preparedfor By default the reports have the phrase *Prepared for U.S. Army Corps of Engineers, Washington, DC 20314-1000* on the title page. To change this designation, use the command \preparedfor, for example,

```
\preparedfor{U.S. Army Engineer Research and Development Center\\  
3909 Halls Ferry Road, Vicksburg, MS 39180-6199}
```

To delete this phrase altogether, use \preparedfor{}.

\contractnum Contract or work unit number is set by \contractnum command, for example

```
\contractnum{Work Unit 33143}
```

\monitoredby Contract reports are monitored by a controlling laboratory. Its name and address is set by this command, for example

```
\monitoredby{U.S. Army Engineer Research and Development Center\\  
3909 Halls Ferry Road, Vicksburg, MS 39180-6199}
```

\additionalinfo The command \additionalinfo{\langle Additional Information\rangle} is used to store additional information for the title page, for example,

```
\additionalinfo{Supersedes TR-2345-12345}
```

abstract The abstract of the report is set using the environment abstract:

```
\begin{abstract}  
This report discusses spins of electrons, protons and other  
fermions.  
\end{abstract}
```

\disclaimer By default all reports have the standard disclaimer. If its text should be changed for any reason, use the macro \disclaimer{\langle New Disclaimer\rangle}, for example

```
\disclaimer{The contents of this report are not to be used for  
advertising, publication, or promotional purposes. Citation of trade  
names does not constitute an official endorsement or approval of the  
use of such commercial products. All product names and trademarks  
cited are the property of their respective owners. The findings of  
this report are not to be construed as an official Department of the
```

```

Army position unless so designated by other authorized documents.

\textbf{DESTROY THIS REPORT WHEN NO LONGER NEEDED. DO NOT RETURN IT
TO THE ORIGINATOR.}}

```

\maketitle The command `\maketitle` typesets the cover page, title page and abstract page of the report based on the data supplied by the macros above. It should therefore be issued *after* these macros.

\tableofcontents Table of contents is typeset with the usual L^AT_EX command [13] `\tableofcontents`. This situation with the list of tables and the list of figures is slightly more involved. The guidelines [1] require the authors to combine the lists into the common list called “Figures and Tables”, which is subdivided into Figures and Tables. The heading of this joint list is a chapter heading, while the headings of the sublists are on the section level. However, the guidelines say nothing about the situation where a report has only figures or only tables. Therefore we chose the following solution:

1. If you have *both* figures and tables, use `\listoffiguresandtables`. It will automatically typeset both lists according to the requirements [1]
2. If you have *only* figures or *only* tables, use either `\listoffigures` or `\listoftables` correspondingly. In this case the heading will be typeset on the chapter level.
3. If you have neither (probably a rare situation), do not use any of these commands.

\chapter In the front matter the command `\chapter` produces an *unnumbered* chapter, so the commands `\chapter{Preface}` and `\chapter*{Preface}` give the same result (see also Section 2.4 below).

2.4 Main Matter

\mainmatter The main matter starts with the macro `\mainmatter`. The text is divided into chapters, sections and subsections in the usual L^AT_EX manner. All familiar L^AT_EX commands and packages should work without problems. Note that unlike articles, reports have chapters as the highest subdivisions. The chapters are numbered, while sections and subsections are not.

\chapter One important difference between the standard L^AT_EX and our class is the following. In standard L^AT_EX the starred command `\chapter*` produces an unnumbered chapter, that does not go into the table of contents. In our class *all* chapters, numbered or not, go into the table of contents.

Tables should have the caption *above* the tabular material rather than below it as in standard L^AT_EX. The class automatically sets the proper spacing for this arrangement, but it is the user’s responsibility to put the `\caption` command before the `\begin{tabular}` environment, for example

```

\begin{table}
  \centering
  \caption{Yearly Dividends}
  \label{tab:dividends}
  \footnotesize\sffamily
  \begin{tabular}{||l|D{.}{.}{2.2}||}
    \hline\hline
    \textbf{Year} & \multicolumn{1}{c||}{\textbf{Dividends, \%}}\\
    \hline\hline
    $1880\$ & 2.50 \\
    \hline
    $1881\$ & 12.1 \\
    \hline
    $1882\$ & 2.6 \\
    \hline\hline
  \end{tabular}
\end{table}

```

Note that the guidelines [1] recommend excessive rules in the tables, with borders around the cells, as shown in the example above. This is usually frowned upon in the good typesetting practice.

The guidelines [1] recommend use footnotesize sans serif entries in the tables itself. The class does *not* do this automatically: the users should put `\footnotesize\sffamily` before `\begin{tabular}`, as shown in the example above.

The guidelines require the centering of numerical columns on decimal point. The class automatically loads `dcolumn` package, so to get aligned columns use the special column designator `D{.}{.}{(n.m)}` where *n* and *m* are the numbers of decimal points before and after the dot correspondingly. It is possible to achieve other effects with this package like centering on the multiplication sign; see the documentation [8] for further information.

`\fbox` The guidelines [1] require the graphics to be surrounded by a hairline box. This is done by the standard `\fbox` command, for example

```

\begin{figure}
  \centering
  \fbox{\includegraphics[width=3in]{plot}}
  \caption{Plot of $f(x)$}
  \label{fig:plot}
\end{figure}

```

The guidelines [1] require equations to be individually centered. This probably precludes the use of `eqnarray` environment and such `amsmath` constructions as `align`, `aligned`, `alignedat` etc.

2.5 Back Matter

`\appendix` Back matter in ERDC reports consists of the bibliography, appendices and distri-

bution forms. The standard L^AT_EX command \appendix changes the enumeration of chapters according to the rules [1]. It should be issued after the bibliography, but before the appendices.

The reports should contain Form 298 (see, for example, <http://www.ntis.gov/pdf/rdpform.pdf>). This form should be typeset separately.

3 Implementation

3.1 Identification

We start with the declaration who we are. Most .dtx files put driver code in a separate driver file .drv. We roll this code into the main file, and use the pseudo-guard <gobble> for it.

```
1 <class>\NeedsTeXFormat{LaTeX2e}
2 <*gobble>
3 \ProvidesFile{erdc.dtx}
4 </gobble>
5 <class>\ProvidesClass{erdc}
6 [2009/07/22 v1.1 Typesetting Technical Information Reports of
7 the Engineer Research and Development Center (ERDC),
8 US Army Corps of Engineers]
```

And the driver code:

```
9 <*gobble>
10 \documentclass{ltxdoc}
11 \usepackage{array}
12 \usepackage{url,amsfonts}
13 \usepackage[breaklinks,colorlinks,linkcolor=black,citecolor=black,
14           pagecolor=black,urlcolor=black,hyperindex=false]{hyperref}
15 \PageIndex
16 \CodelineIndex
17 \RecordChanges
18 \EnableCrossrefs
19 \begin{document}
20   \DocInput{erdc.dtx}
21 \end{document}
22 </gobble>
23 <*class>
```

3.2 Options

\erdc@size@warning The font-changing options are not used in our setup, so we just produce a warning:

```
24 \long\def\erdc@size@warning#1{%
25   \ClassWarning{erdc}{Size-changing option #1 will not be
26   honored}}%
27 \DeclareOption{8pt}{\erdc@size@warning{\CurrentOption}}%
28 \DeclareOption{9pt}{\erdc@size@warning{\CurrentOption}}%
29 \DeclareOption{10pt}{\erdc@size@warning{\CurrentOption}}%
30 \DeclareOption{11pt}{\erdc@size@warning{\CurrentOption}}%
31 \DeclareOption{12pt}{\erdc@size@warning{\CurrentOption}}%
```

All other options are just sent to the main class:

```
32 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{report}}
33 \ProcessOptions\relax
```

3.3 Loading Class and Packages

We start with the base class and some packages

```
34 \LoadClass[12pt,twoside]{report}
35 \RequirePackage{graphicx,color,caption,longtable}
```

We use `dcolumn` for dot-centered columns:

```
36 \RequirePackage{dcolumn}
```

We use `natbib` [10] for bibliography formatting:

```
37 \RequirePackage{natbib}
38 \renewcommand{\bibfont}{\fontsize{10pt}{12pt}\selectfont}
39 \setlength{\bibhang}{0.5in}
40 \setlength{\bibsep}{12pt}
```

We load `amsmath` since we want to change the equation numbering scheme: `amsmath` redefines it.

```
41 \RequirePackage{amsmath}
```

We do not want the option `document` with `ragged2e`: this calls `footmisc`, while we want our own footnotes:

```
42 \RequirePackage[originalcommands]{ragged2e}
43 \setlength\RaggedRightParindent{\parindent}
44 \RaggedRight
```

3.4 Fonts

`\normalsize` The size is basically from [15], but with some changes according to our fonts:

```
45 \renewcommand\normalsize{%
46   \@setfontsize\normalsize\@xiipt{16}%
47   \abovedisplayskip 16\p@ \@plus3\p@ \@minus7\p@
48   \abovedisplayshortskip \z@ \@plus3\p@
49   \belowdisplayshortskip 6.5\p@ \@plus3.5\p@ \@minus3\p@
50   \belowdisplayskip \abovedisplayskip
51   \let\@listi\@listI}
52 \normalsize
```

We use Georgia for the main font, matching Franklin Gothic for the sans serifed font, and Courier for the monospaced font:

```
53 \usepackage{mathgifg}
54 \usepackage{courier}
```

`\@laboratoryfont` Font to typeset the laboratory on the cover

```
55 \def\@laboratoryfont{%
56   \sffamily\bfseries\fontsize{22pt}{25pt}\selectfont}
```

`\@reportnumfont` Font to typeset the report number on the cover

```
57 \def\@reportnumfont{%
58   \sffamily\bfseries\fontsize{18pt}{22pt}\selectfont}
```

```

\@programfont  Font to typeset the program on the cover
59 \def\@programfont{%
60   \sffamily\fontseries{k}\itshape\normalsize\selectfont}

\@titlefont    Font to typeset the title on the cover and chapter numbers
61 \def\@titlefont{%
62   \sffamily\fontseries{h}\fontsize{20pt}{25pt}\selectfont}

\@distributionfont  Font to typeset the distribution statement
63 \def\@distributionfont{%
64   \sffamily\fontseries{k}\fontsize{9pt}{11pt}\selectfont}

\@eqtagfont    The font for the equations
65 \def\@eqtagfont{\sffamily\bfseries\footnotesize}

```

3.5 Page Dimensions and Paragraphing

The requirements are 1.25" (top), 0.7" (bottom), 1.5" (left), and 1.5" (right). However, we need to add for the headers.

```

66 \RequirePackage[letterpaper, top=1in, bottom=0.7in,
67   left=1.5in, right=1.5in]{geometry}

\parindent    The paragraphs have no indentation...
68 \setlength{\parindent}{0pt}

\parskip     ... and there is one baseline skip between paragraphs
69 \setlength{\parskip}{\baselineskip}

\labelwidth   The width of label for enumerate and itemize environments
70 \setlength{\labelwidth}{1em}

\leftmargini  We align lists with the body
71 \setlength{\leftmargini}{0pt}
72 \addtolength{\leftmargini}{\labelwidth}
73 \addtolength{\leftmargini}{\labelsep}

\itemize      We want left-aligned bullets:
74 \def\itemize{%
75   \ifnum \c@itemdepth > \thr@@ \c@toodeep \else
76     \advance\c@itemdepth\@ne
77     \edef\@itemitem{\labelitem\romannumeral\the\c@itemdepth}%
78     \expandafter
79     \list
80       \csname\@itemitem\endcsname
81       {\def\makelabel##1{\relax\@mkboth{##1}{##1}}\relax}
82   \fi}

```

```

\enumerate We left-align numbers
83 \def\enumerate{%
84   \ifnum \c@enumdepth > \thr@@ \c@toodeep \else
85     \advance \c@enumdepth \one
86     \edef\c@enumctr{\enum\romannumeral\the\c@enumdepth}%
87     \expandafter
88     \list
89       \cscname label\c@enumctr\endcscname
90       {\usecounter\c@enumctr\def\makelabel##1{\c@##1}}%
91   \fi}

\widowpenalty We forbid widows and clubs. To prevent too extended pages we use \raggedbottom:
\clubpenalty 92 \widowpenalty=10000
93 \clubpenalty=10000
94 \raggedbottom

```

3.6 Headers and Footers

We use fancyhdr:

```
95 \RequirePackage{fancyhdr}
```

```

\headrulewidth Decorative rules:
\footrulewidth 96 \renewcommand{\headrulewidth}{0.5pt}
97 \renewcommand{\footrulewidth}{0pt}

\fancyhoffset Headers are wider than the text
98 \fancyhoffset{35pt}

```

We do not have headers:

```

99 \pagestyle{fancy}
100 \lhead{\textsf{\textbf{\footnotesize{\@reportnum}}}}
101 \rhead{\textsf{\textbf{\footnotesize{\thepage}}}}
102 \chead{}

```

We do not have footers:

```

103 \lfoot{}
104 \cfoot{}
105 \rfoot{}

```

3.7 Main Subdivisions

```

\if@frontmatter The switch whether we are in the frontmatter
106 \newif\if@frontmatter
107 \c@frontmatterfalse

\if@appendix The switch whether we are in the appendix
108 \newif\if@appendix
109 \c@appendixfalse

```

```

\frontmatter Starting front matter
110 \def\frontmatter{%
111   \pagenumbering{roman}%
112   \frontmattertrue
113   \appendixfalse}

\mainmatter Starting main matter
114 \def\mainmatter{%
115   \cleardoublepage
116   \pagenumbering{arabic}%
117   \frontmatterfalse
118   \appendixfalse}

\appendix Start appendices
119 \def\appendix{%
120   \clearpage
121   \frontmatterfalse
122   \appendixtrue
123   \addtoreset{table}{chapter}%
124   \addtoreset{equation}{chapter}%
125   \addtoreset{figure}{chapter}%
126   \setcounter{chapter}{0}%
127   \setcounter{section}{0}%
128   \gdef\chapapp{\appendixname}%
129   \gdef\thechapter{\@Alph\c@chapter}%
130   \gdef\thefigure{\@Alph\c@chapter\@arabic\c@figure}%
131   \gdef\thetable{\@Alph\c@chapter\@arabic\c@table}%
132   \gdef\theequation{\@Alph\c@chapter\@arabic\c@equation}}

```

3.8 Cover and Title Pages

```

\laboratory This macro sets up the laboratory name:
133 \def\laboratory#1{\gdef\@laboratory{#1}}
134 \laboratory{Engineer Research and Development Center}

\reportnum Report number:
135 \def\reportnum#1{\gdef\@reportnum{#1}}
136 \reportnum{ERDC TR-01-01}

\program Program:
137 \def\program#1{\gdef\@program{#1}}
138 \program{ }

\subtitle Subtitle:
139 \newcommand{\subtitle}[1]{\gdef\@subtitle{#1}}
140 \def\@subtitle{ }

```

The author and affiliation processing follows the ideas of [16]. We lift most of the code from there.

The general function to convert a list of items in the form

`A\and B\and C\and D`

to the form ‘A, B, C, and D’ is `\xandlist`:

`\xandlist{, }{ and }{, and }{A\and B\and C\and D}`

This is a completely expandable macro, with the return value being the converted list. There is also a ‘no-execute’ version whose fourth argument should be a macro; the text to be converted will be taken from that macro and after conversion will be put back as the macro’s new replacement text.

`\nxandlist{, }{ and }{, and }{\result}`

I don’t think I want to explain this except by recommending that you watch it in operation with `\tracingmacros` if you’re interested.
[mjd,1994/10/19]

```
141 \newcommand{\xandlist}[4]{\@andlista{{#1}{#2}{#3}}#4\and\and}
142 \def\@andlista#1#2\and#3\and{\@andlistc{#2}\@ifnotempty{#3}{%
143   \@andlistb#1{#3}}}
144 \def\@andlistb#1#2#3#4#5\and{%
145   \@ifempty{#5}{%
146     \@andlistc{#2#4}%
147   }{%
148     \@andlistc{#1#4}\@andlistb{#1}{#3}{#3}{#5}%
149   }%
150 \let\@andlistc\@iden
151 \newcommand{\nxandlist}[4]{%
152   \def\@andlistc##1{\toks@{\exp{\the\toks@##1}}%
153   \toks@{\toks@{\emptytoks \@andlista{{#1}{#2}{#3}}}}%
154   \the\exp\toks@#4\and\and
155   \edef#4{\the\toks@}%
156   \let\@andlistc\@iden}
```

andify The `\andify` function is provided as a convenient abbreviation for the most common case. See also `\authorandify` (for `amsart` and `amsproc` only), which gives better results in cases with a large number of authors. Provide a substitutable text string to simplify language-specific modifications.

```
157 \def\@and{and}
158 \newcommand{\andify}{{%
159   \nxandlist{\unskip, }{\unskip{} \@and~}{\unskip, \@and~}}}
Override the funny default definition of \and from LATEX. This is not
actually used by AMS classes, however.
160 \def\and{\unskip{} \@and{} }\ignorespaces}
```

This requires some other AMS math macros:

```

161 \let\@xp\expandafter\relax
162 \let\@nx=\noexpand
163 \def\@oparg#1[#2]{\@ifnextchar[{\@ifempty{#1}{#1[#2]}}}
164 \long\def\@ifempty#1{\@ifempty#1@..\@nil}

354  \egroup
355  \clearpage

```

3.9 Sectioning

\cl@chapter We do *not* reset equation counters when stepping chapters, except in appendices:

```
356 \def\cl@chapter{}
```

However, we do reset section and subsection counters

```
357 \@addtoreset{section}{chapter}%
358 \@addtoreset{subsection}{chapter}%
359 \@addtoreset{subsection}{section}%
```

\chapter We redefine \chapter to suppress empty page style on chapter opening:

```
360 \renewcommand\chapter{%
361   \clearpage
362   \global\@topnum\z@
363   \@afterindentfalse
364   \secdef\@chapter\@schapter}
```

\@chapter Non-starred chapter:

```
365 \def\@chapter[#1]#2{%
366   \if@frontmatter
367     \addcontentsline{toc}{chapter}{#1}%
368     \makechapterhead{#2}%
369   \else
370     \refstepcounter{chapter}%
371     \typeout{\@chapapp\space\thechapter.}%
372     \if@appendix
373       \addcontentsline{toc}{chapter}{%
374         {\@chapapp\space\thechapter: #1}%
375       }%
376       \makechapterhead{\@chapapp\space\thechapter: #2}%
377     \else
378       \addcontentsline{toc}{chapter}{%
379         {\protect\numberline{\thechapter}#1}%
380       }%
381     \fi
382   \fi
383 \afterheading}
```

\@schapter Starred chapter:

```
383 \def\@schapter#1{%
384   \if@appendix
385     \addcontentsline{toc}{chapter}{\@chapapp: #1}%
386     \makeschapterhead{\@chapapp: #1}%
387   \else
388     \addcontentsline{toc}{chapter}{#1}%
389     \makeschapterhead{#1}%
390   \fi
391 \afterheading}
```

\makechapterhead This is the macro that actually prints the chapter:

```

392 \def\@makechapterhead#1{%
393   \vspace*{5\p@}%
394   {\hspace{-35\p@}%
395    \parindent\z@\raggedright
396    \interlinepenalty\OM
397    \titlefont #1\par\nobreak
398    \vspace*{10\p@}%
399  }%

```

\@makeschapterhead This is like `\makechapterhead`, but does not create hanging indent:

```

400 \def\@makeschapterhead#1{%
401   \vspace*{5\p@}%
402   {%
403    \parindent\z@\raggedright
404    \interlinepenalty\OM
405    \leftskip-35\p@\titlefont #1\par\nobreak
406    \vspace*{10\p@}%
407  }%

```

\theequation We do not use chapter number in equations, except in appendices:

```
408 \renewcommand \theequation {\@arabic\c@equation}
```

tocdepth Only chapters, sections, subsections are in TOC:

```
409 \setcounter{tocdepth}{2}
```

\section Sections are in 14 pt bold.

```

410 \renewcommand\section{%
411   \addpenalty\@secpenalty\nobreak
412   \secdef\@section\@ssection}

```

\@section This is for numbered sections:

```

413 \def\@section[#1]#2{%
414   \ifnum1>\c@secnumdepth
415     \addcontentsline{toc}{section}{#1}%
416   \else
417     \refstepcounter{section}%
418     \addcontentsline{toc}{section}{\protect\numberline{\thesection}#1}%
419   \fi
420   {\hspace{-35\p@}\raggedright\interlinepenalty\OM
421   \large\sffamily\bfseries
422   \ifnum1>\c@secnumdepth\else\makebox[35\p@]{\thesection\hfill}\fi\#2\nobreak\par}
423   \afterheading
424   \nobreak\par}

```

\@ssection Unnumbered sections:

```

425 \def\@ssection#1{%
426   \addcontentsline{toc}{section}{#1}%
427   {\raggedright\interlinepenalty\OM
428   \large\sffamily\bfseries\leftskip-35\p@#1\nobreak\par}

```

```

429     \c@afterheading
430     \nobreak\par}

\subsection Subsections are also bold
431 \renewcommand\subsection{\par
432   \addpenalty\@secpenalty\nobreak
433   \secdef\subsection\c@subsection}

\c@subsection Numbered subsections:
434 \def\c@subsection[#1]#2{%
435   \ifnum2>\c@secnumdepth
436     \addcontentsline{toc}{subsection}{\itshape#1}%
437   \else
438     \refstepcounter{subsection}%
439     \addcontentsline{toc}{subsection}{\itshape\fontsize{9}{12}\selectfont
440       \protect\numberline{\thesubsection}%
441       #1}%
442   \fi
443   {\noindent\raggedright\interlinepenalty\@M
444     \normalsize\sffamily\bfseries
445     \ifnum2>\c@secnumdepth\else\thesubsection\hspace{1em}\fi#2}\nobreak\par}

\c@subsection Unnumbered subsections
446 \def\c@subsection#1{%
447   \addcontentsline{toc}{subsection}{\itshape\fontsize{9}{12}\selectfont#1}%
448   {\noindent\raggedright\interlinepenalty\@M
449     \normalsize\sffamily\bfseries#1}\nobreak\par}

```

3.10 Special Chapters and Sections

Since our unnumbered sections go to the TOC, we need to have special ones that do not.

```

\specialchapter A chapter that does not go into TOC...
450 \def\specialchapter#1{%
451   \clearpage
452   \global\@topnum\z@
453   \c@afterindentfalse
454   \makeschapterhead{\par
455   \c@afterheading}

```

3.11 Front Page Lists

Here we define tables of contents, lists of figures, tables and the combined lists.

```

\dotsep Separation between dots in tables
456 \def\dotsep{0.5}

```

\l@chapter Here we define chapter entry in TOC. Note the leaders to the end:

```
457 \renewcommand\l@chapter[2]{%
458   \def\numberline##1{\makebox[1.9em]{##1\hfill}}%
459   \addpenalty{-\highpenalty}%
460   \vskip5\p@
461   \bgroup
462     \parindent\z@\rightskip\@pnumwidth
463     \parfillskip-\@pnumwidth
464     \leavevmode\bfseries
465     \leftskip1.9em%
466     \hskip-\leftskip
467     #1\nobreak\leaders\hbox{$\m@th\mkern\@dotsep
468       \mu\hbox{.}\mkern\@dotsep
469       \mu$}\hfill\nobreak{\hfil,,#2}\par
470   \vskip5\p@
471   \penalty\highpenalty
472 \egroup}
```

\@dottedtocline We redefine the standard macro to allow page number font to be right and to continue leaders to the end:

```
473 \def\@dottedtocline#1#2#3#4#5{%
474   \bgroup
475   \def\numberline##1{\makebox[#3]{##1\hfill}}%
476   \ifnum #1>\c@tocdepth \else
477     \vskip \z@ \@plus.2\p@
478     {\leftskip #2\relax \rightskip \@tocrmarg \parfillskip -\rightskip
479     \parindent #2\relax\@afterindenttrue
480     \interlinepenalty\@M
481     \leavevmode
482     \tempdima #3\relax
483     \advance\leftskip \tempdima \null\nobreak\hskip -\leftskip
484     #4\nobreak
485     \leaders\hbox{$\m@th
486       \mkern\@dotsep \mu\hbox{.}\mkern\@dotsep
487       \mu$}\hfill
488     \nobreak
489     {\hfil \normalcolor ,#5}%
490     \par}%
491   \fi
492 \egroup}
```

\@dottedtoclineLF This is the version of \@dottedtocline used in LOT and LOF

```
493 \def\@dottedtoclineLF#1#2#3#4#5{%
494   \bgroup
495   \ifnum #1>\c@tocdepth \else
496     \vskip \z@ \@plus.2\p@
497     {\leftskip #2\relax \rightskip \@tocrmarg \parfillskip -\rightskip
498     \parindent #2\relax\@afterindenttrue
499     \interlinepenalty\@M
```

```

500      \leavevmode
501      \@tempdima #2\relax
502      \advance\leftskip \@tempdima \null\nobreak\hskip -\@tempdima
503      #4\nobreak
504      \leaders\hbox{$\m@th
505          \mkern \dotsep mu\hbox{.}\mkern \dotsep
506          mu$}\hfill
507      \nobreak

541   \vspace*{10pt}%
542   \def\numberline##1{Table ##1. }%
543   {\parskip2.5\p@\footnotesize\sffamily\fontseries{k}\selectfont\raggedright
544     \starttoc[lot]{}}

```

\bibname We use “References” for bibliography

```

545 \renewcommand\bibname{References}

```

3.12 Figures and Tables

\@fptop We want the figures on figures-only page to be vertically top-aligned rather than centered:

```

546 \setlength{\@fptop}{0pt}%

```

\thefigure We do not use chapter numbers in figures, except in appendix:

```

547 \renewcommand \thefigure {\@arabic\c@figure}

```

\thetable We do not use chapter numbers in tables either:

```

548 \renewcommand \thetable {\@arabic\c@table}

```

Setting up captions:

```

549 \captionsetup{justification=centering,font={footnotesize,sf,bf},
550 labelsep=period,aboveskip=3pt}
551 \captionsetup[table]{position=top}

```

\arraystretch Increase array stretch:

```

552 \def\arraystretch{1.3}

```

3.13 Equation Numbering

\maketag@@@ We change the amsmath definition:

```

553 \let\maketag@@@=\maketag@@@
554 \def\maketag@@@#1{\hbox{\m@th\eqtagfont#1}}

```

\eqref We also change \eqref, otherwise the references will be in the wrong font:

```

555 \renewcommand{\eqref}[1]{\textup{\tagform@{\ref{#1}}}}

```

\tagform@@ This is the original `amsmath` version:

```
556 \def\tagform@@#1{\maketag@@@{(\ignorespaces#1\unskip\@italiccorr)}}
```

3.14 The final word

557 </class>

3.15 Acknowledgements

The class was commissioned and paid for by US Army Corps of Engineers, Engineer Research and Development Center, 3909 Halls Ferry Road, Vicksburg, MS 39180-6199.

I am grateful to Gordon L. Cohen, ERDC-ITL-IL for the detailed explanations of the ERDC guidelines, to Christopher E. Kees, ERDC-CHL-MS and Ryan E. North, ERDC-GSL-MS, for the formatting suggestions and the patient recompilation of the reports with each new version of the style.

Change History

| | | | | | |
|------|---|----|--|---|----|
| v0.1 | General: First fully functional version | 3 | v0.4 | \@dottedtocline: Deleted hanging indent | 24 |
| | Macro: Introducing the \elaboratoryfont macro | 11 | | Redefined | 24 |
| v0.2 | \elaboratoryfont: Introduced the \programfont macro | 12 | \@dottedtoclineLF: Wrote macro \@section: Made sections numbered | 22 | |
| | \reportnumfont: Introduced the \titlefont macro | 11 | \@ssection: Wrote the macro \@ssubsection: Wrote the macro \@subsection: Made subsections numbered | 22 | |
| | Macro: Added dcolumn General: Added ragged2e | 11 | \abstract: Increased parsep | 17 | |
| | Changed caption skips | 26 | \contentsname: Changed defaults \l@chapter: Added leaders | 25 | |
| | Changed fonts | 11 | \l@figure: Redefined | 25 | |
| | \chapter: Changed font | 21 | \l@section: Changed defaults | 25 | |
| | \coverart: Changed the width of cover art | 16 | \l@subsection: Changed defaults \l@table: Redefined | 25 | |
| | \coverlist: Made slightly thinner | 18 | \maketitle: Made the gap between red and black stripes on the cover exactly 4.5pt (added 2.75pt) | 18 | |
| | \maketitle: Changed fonts | 18 | Moved boxes around | 18 | |
| | Made slightly thinner | 18 | v0.5 | \@fptop: Redefined | 26 |
| | \normalsize: Changed line spacing | 11 | General: Changed numbering of sections | 21 | |
| v0.3 | \@distributionfont: Introduced the macro | 12 | v1.0 | General: Bug fixes | 3 |
| | \eqtagfont: Introduced the macro | 12 | v1.1 | \l@chapter: Changed wrapping | 21 |
| | \programfont: Changhed weight to Book | 12 | \@dottedtocline: Changed wrapping | 24 | |
| | General: Added amsmath | 11 | \l@makechapterhead: Changed wrapping | 21 | |
| | Added natbib | 11 | \l@makeschapterhead: Wrote the macro | 22 | |
| | \eqref: Introduced the macro | 26 | \@section: Changed wrapping | 22 | |
| | \headrulewidth: Chaneged thickness | 13 | \@ssection: Changed wrapping | 22 | |
| | \l@chapter: Deleted leaders | 24 | General: Changed bottom margin to 0.7" | 12 | |
| | \listoffiguresandtables: Added some vertical space | 26 | Documentation Update | 3 | |
| | \maketag@@@: Introduced the macro | 26 | \clubpenalty: Changed settings | 13 | |
| | \maketitle: Aligned the distribution line | 18 | \l@enumerate: Changed defaults | 13 | |
| | Changed disclaimer width | 18 | \l@itemize: Changed defaults | 12 | |
| | Changed font sizes | 18 | \l@chapter: Changed wrapping | 24 | |
| | Changhed weight to Book | 18 | \l@section: Changed wrapping | 25 | |
| | Increased box for the laboratory | 18 | | | |
| | \tagform@@: Introduced the macro | 27 | | | |

| | |
|---------------------------------|----|
| \l@subsection: Changed wrap- | |
| ping | 25 |
| \labelwidth: Changed defaults . | 12 |
| \leftmargini: Changed defaults | 12 |
| \maketitle: Added drop between | |
| authors and addresses | 18 |
| Compensated for top margin | |
| change | 18 |

Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in roman refer to the code lines where the entry is used.
